

Sump Pump Back-up Protection, 24 Hours a Day,
Whether You're Home or Away!

UltraSump®

BATTERY BACK-UP SYSTEM

As an addition to your SuperSump®, we recommend a back-up pumping system. The UltraSump® represents the state-of-the-art in battery back-up pumping systems. When added as an option to our SuperSump®, the UltraSump® will turn on automatically if the primary pump fails to operate. The UltraSump® includes a second DC operated pump, a second automatic switching system, a 'smart' charging system, and a high-quality 120 amp battery.

The UltraSump® battery back-up allows you to relax even when you are not home.

The UltraSump® configuration is reliable and designed to complement a SuperSump®.

The reliable UltraSump® back-up pump is designed and manufactured by Basement Systems Inc. specifically for our applications. When your primary pump fails because of a power outage or any other reason the water rises and automatically turns on your UltraSump® back-up system, which is powered by a battery specifically designed for long term standby use. When power is restored the battery is automatically recharged for the next emergency. The high-tech charging system was engineered for this purpose. The UltraSump® will pump out over 11,000 gallons on a new, fully-charged battery, giving you time to restore the primary pump before a flood occurs. The optional UltraSump® battery switcher (normally not included) allows two batteries to be hooked up to the UltraSump® to double its pumping capacity. Ask your dealer for details.

You can rest easy 24 hours a day knowing the UltraSump® is on the job, especially when you are away from home. Its outstanding 2000 gallon per hour output, automatic electronic "smart" charger, heavy duty motor and reliable switch, are a winning combination. For the newest, state-of-the-art protection, ask about Basement Systems' TripleSafe™ Sump System.
